IN THE BOARD OF PATENT APPEALS AND INTERFERENCES

Applicant: Harold W. Milton, Jr.

Appl. No.: 09/273,021

Filed: March 19, 1999

Art Unit: 2627

Examiner: Sanjiv D. Shah

For: SYSTEM FOR FACILITATING THE PREPARATION
OF A PATENT APPLICATION

Docket No.: MILT.777 (652320-00011)

Mail Stop Petitions
Commissioner of Patents
P. O. Box 1450
Alexandria, VA 22313-1450

APPEAL BRIEF

TABLE OF CONTENTS

BRIEF ON APPEAL

I. REAL PARTY IN INTEREST

The real party in interest is the above named inventor.

II. RELATED APPEALS AND INTERFERENCES

There are no appeals or interferences known to Appellant relevant to these proceedings.

III. STATUS OF CLAIMS

Claims 1,3,10, and 19-28 are pending in the application, with claims 1, 19, 20, 21, and 26 being independent.   The full text of each claim rejected on prior art is reproduced in the Claims Appendix VIII.

IV. STATUS OF AMENDMENTS

All amendments have been entered.

V. SUMMARY OF CLAIMED SUBJECT MATTER

Dependent claims 3, 10, 22, 24, 25 and 28 will not be argued per se, i.e., separately from independent method claims 1, 19, 21 and independent computer claims 20, 26 and dependent claims 23 and 27, which have antecedent basis in the drawings by reference numerals and in the specification by paragraph (¶) and/or line and page numbers as follows through page 16 hereof:

Claim 1.   A method of preparing a patent application with a computer comprising the steps of: (pg. 8, ln 14)

storing **(10)** a document template in a computer program which contains headings equivalent to: (pg. 4, ln. 11 et seq. and pg. 8, ln 16)

"BACKGROUND OF THE INVENTION

1)   Field of the Invention

2)   Description of the Prior Art

SUMMARY OF THE INVENTION AND ADVANTAGES

BRIEF DESCRIPTION OF THE DRAWINGS

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT

CLAIMS

ABSTRACT OF THE DISCLOSURE";

storing a page break immediately before the "CLAIMS" heading in the computer program; (pg. 5, ln 1-2, pg. 8, ln. 18-19)

storing a page break immediately before the "ABSTRACT OF THE DISCLOSURE" heading in the computer program; (pg. 5, ln 3-4, pg. 8, ln. 20-21)

storing a footer in the computer program for displaying the attorney file identification on every page of the application; (pg. 5, ln 7-8, pg. 9, ln. 1-3)

composing by a user an independent claim in the computer program ending in a clause beginning with the words "characterized by" and reciting and isolating the novelty and preceded by at least one clause reciting prior art elements to the extent necessary to support and provide antecedent basis for the "characterized by" clause; (pg. 9, ln 10-15)

drafting claims in the computer ultimately dependent upon the independent claim for successively more specifically defining the patentable novelty; and (pg. 9, ln 16-18)

characterized by storing **(14)** a duplicate set of all of the claims in the computer program, (pg. 6, ln 16-17. pg. 10, ln. 13-15) and creating the description by retrieving the duplicate set of claims under the heading "DESCRIPTION OF THE PREFERRED EMBODIMENT", (pg. 10, ln 13-17) searching for each occurrence of the word "said" in the duplicate set of claims copied into the specification, programming the computer program to replace the word "said" with the word "the" in the duplicate set of

claims copied into the specification, (pg. 10, ln 17-22) and editing the duplicate set of claims copied into the specification into grammatically correct sentence structure including adding verbs, (pg. 10, ln 21-22) and assigning reference numerals for the first time by the steps **(16, 18, 20)** of storing the element names of the elements in the order recited in the duplicate set of claims, (pg. 11, ln 8-22) storing successive numbers beginning with a number above the highest Figure number to identify the respective element names, (pg. 12, ln 1-5) and searching for each occurrence of each respective element name in the order of occurrence in the duplicate set of claims, replacing each respective element name with that respective element name followed by successive ones of said numbers to provide identifying reference numerals for the element names in the order of occurrence in the duplicate set of claims (pg. 12, ln 1-5) and automatically shifting the reference numerals in response to changing the order of occurrence in the duplicate set of claims. (pg.7, ln 17-20)

Claim 19. A method of preparing a patent application with a computer characterized by performing the following steps:

storing **(10)** a document template in a computer program which contains headings equivalent to, : (pg. 4, ln. 11 et seq. and pg. 8, ln 16)

"BACKGROUND OF THE INVENTION

SUMMARY OF THE INVENTION AND ADVANTAGES

BRIEF DESCRIPTION OF THE DRAWINGS

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT

CLAIMS

ABSTRACT OF THE DISCLOSURE";

storing a page break in the computer program immediately before the "CLAIMS" heading; (pg. 5, ln 1-2, pg. 8, ln. 18-19)

storing a page break in the computer program immediately before the heading (pg. 5, ln 3-4, pg. 8, ln. 20-22)

"ABSTRACT OF THE DISCLOSURE";

storing a footer in the computer program for displaying the attorney file identification on every page of the application; (pg. 5, ln 7-8, pg. 9, ln. 1-3)

storing a Figure paragraph in the computer program immediately after the heading "BRIEF DESCRIPTION OF THE DRAWINGS"; (pg. 9, ln 4-5)

storing a terminal paragraph in the computer program stating it is to be understood that reference numerals in the claims are merely for convenience and are not to be in any way limiting immediately before the page break before the heading "CLAIMS"; (pg. 5, ln 11-15 pg. 9, ln. 6-9)

composing by a user an independent claim in the computer program beginning with the words "characterized by" and ending in a clause reciting and isolating the novelty and preceded by at least one clause reciting prior art elements only to the extent necessary to support and provide antecedent basis for the recitations in the "characterized by" clause; (pg. 9, ln 10-15)

composing by a user claims in the computer program ultimately dependent upon the independent claim for successively more specifically defining the novelty; (pg. 9, ln 16-18)

storing (12) a duplicate of the independent claim in the computer program, (pg. 10, ln 1-5)

retrieving the stored independent claim under the heading "SUMMARY OF THE INVENTION AND ADVANTAGES", and editing the duplicate independent claim

copied under the heading "SUMMARY OF THE INVENTION AND ADVANTAGES" into grammatically correct sentence structure including changing the word "said" to "the" and adding verbs without adding further description whereby the "SUMMARY OF THE INVENTION AND ADVANTAGES" is commensurate in scope to the independent claim; (pg. 10, ln 1-5)

storing (14) a duplicate set of all of the claims in the computer program, and creating the description by retrieving the duplicate set of claims under the heading "DESCRIPTION OF THE PREFERRED EMBODIMENT"; (pg. 10, ln 13-17)

searching for each occurrence of the word "said" in the duplicate set of claims copied into the specification, programming the computer program to replace the word "said" with the word "the" in the duplicate set of claims copied into the specification, and editing the duplicate set of claims copied into the specification into grammatically correct sentence structure including adding verbs; (pg. 6, ln 16-22. pg. 10, ln. 17-22)

storing the element names in the computer program of the elements in the order recited in the duplicate set of claims, storing (16) in the computer program successive even numbers beginning with a number above the highest Figure number (18) to identify the respective element names, (pg. 12, ln 1-5) and searching (20) in the computer program for each occurrence of each respective element name in the order of occurrence in the duplicate set of claims and replacing each respective element name with that respective element name followed by successive ones of the even numbers to provide for the first time identifying reference numerals for the element names in the order of occurrence in the duplicate set of claims (pg. 12, ln 1-5) and automatically shifting the reference numerals in response to changing the order of occurrence in the duplicate set of claims; (pg.7, ln 17-20)

adding each reference numeral to every showing of the element in the drawings; (pg. 12, ln 14-19)

selecting and storing **(22)** in the computer program abstract sentences including reference numbers from under the heading "DESCRIPTION OF THE PREFERRED EMBODIMENT" which most succinctly and specifically describe the elements shown in the drawings with a description of the elements in the "characterized by" clause commensurate with the specificity recited in dependent claims, and retrieving the abstract sentences under the heading "ABSTRACT OF THE DISCLOSURE"; and (pg. 7, ln. 21 et seq., pg. 12, ln 20 et seq.)

storing **(24)** in the computer program each reference numeral recited in the "CLAIMS" and in the "ABSTRACT OF THE DISCLOSURE" within parenthesis "( )", searching in the computer program and replacing each such reference numeral in the "CLAIMS" and in the "ABSTRACT OF THE DISCLOSURE" with the corresponding stored reference number within parentheses "( )". (pg. 8, ln 7-11, pg. 13, ln. 6-11)

Claim 20.   A computer program and a computer comprising:

a template memory **(10)** containing a document template containing headings equivalent to, (pg. 4, ln. 10 et seq.)

"BACKGROUND OF THE INVENTION

1)   Field of the Invention

2)   Description of the Prior Art

SUMMARY OF THE INVENTION AND ADVANTAGES

BRIEF DESCRIPTION OF THE DRAWINGS

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT

CLAIMS

ABSTRACT OF THE DISCLOSURE";

a page break immediately before said heading "CLAIMS" in the computer program; and (pg. 5, ln. 1-3)

a page break separating said heading "ABSTRACT OF THE DISCLOSURE" from the remainder of said headings in the computer program; and (pg. 5, ln. 4-6)

a footer for displaying the attorney file identification in the margin of every page of the application; and (pg. 5, ln. 6-10)

the text,

"Other advantages of the present invention will be readily appreciated as the same becomes better understood by reference to the following detailed description when considered in connection with the accompanying drawings wherein:

Figure 1 is ;

Figure 2 is ;

Figure 3 is ;

Figure 4 is ; and

Figure 5 is ."

immediately after the heading "BRIEF DESCRIPTION OF THE DRAWINGS"; (pg. 5, ln. 15 et seq.);

the text,

"The invention has been described in an illustrative manner, and it is to be understood that the terminology which has been used is intended to be in the nature of words of description rather than of limitation.

Obviously, many modifications and variations of the present invention are possible in light of the above teachings. It is, therefore, to be understood that within the scope of the appended claims, wherein reference numerals are merely for convenience and are not to be in any way limiting, the invention may be practiced otherwise than as specifically described."

before said page break preceding the heading "CLAIMS"; (pg. 5, ln. 11-17

and characterized by an independent claim processor **(12)** for duplicating and storing an independent claim under the heading "SUMMARY OF THE INVENTION AND ADVANTAGES" and for editing the duplicated independent claim copied under the heading "SUMMARY OF THE INVENTION AND ADVANTAGES" into grammatically correct sentence structure including changing "said" to "the" and adding verbs whereby the recitation under the heading "SUMMARY OF THE INVENTION AND ADVANTAGES" is commensurate in scope to said independent claim; (pg. 6 ln. 4-15)

a multiple claim processor **(14)** for duplicating and storing all of the claims under said heading "DESCRIPTION OF THE PREFERRED EMBODIMENT" for creating the description and for searching and replacing each occurrence of the word "said" in said duplicate set of claims copied under the heading "DESCRIPTION OF THE PREFERRED EMBODIMENT" with the word "the", and for editing said duplicate set of claims into grammatically correct sentence structure; (pg. 6 ln. 16 et seq.)

a reference number memory **(16)** for storing successive even numbers beginning with the number ten; (pg. 7 ln. 3 et seq.)

a Figure number memory **(18)** for receiving and storing the highest Figure number used to identify Figures of the drawings; (pg. 7 ln. 3 et seq.)

a reference number processor **(20)** (pg. 7 ln. 5 et seq.) responsive to said Figure number memory for storing the element names of the elements in the order recited in said duplicate set of claims and for searching and replacing each occurrence of each respective element name in the order of occurrence in said duplicate set of claims with said respective element name followed by successive ones of said even numbers beginning with the first number ending in zero following the highest Figure number to provide for the first time identifying reference numerals for said element names in the order of occurrence in said

duplicate set of claims and automatically shifting the reference numerals in response to changing the order of occurrence in the duplicate set of claims; (pg. 7 ln. 10-13)

an abstract processor **(22)** for selecting and storing abstract sentences including said reference numerals from under said heading "DESCRIPTION OF THE PREFERRED EMBODIMENT" and duplicating said abstract sentences under said heading "ABSTRACT OF THE DISCLOSURE"; and (pg. 7 ln. 21 et seq.)

a parenthesis processor **(24)** for automatically enclosing each reference numeral within parentheses in said claims and in said "ABSTRACT OF THE DISCLOSURE". (pg. 8 . ln. 8-13)

Claim 21. A method of preparing a patent application with a computer comprising the steps of:

storing **(10)** a document template in a computer program which contains headings equivalent to: (pg. 4, ln. 11 et seq. and pg. 8, ln. 16)

"SUMMARY OF THE INVENTION

DETAILED DESCRIPTION

CLAIMS

ABSTRACT";

drafting claims for specifically defining the novelty; and (pg. 9, ln. 10-18)

characterized by duplicating **(14)** at least one of the claims under the DESCRIPTION heading to make sure the description as created in the first instance uses the exact same terminology as used in the claims, (pg. 6, ln. 16-17 and pg. 10, ln. 13-17)

editing the duplicate claim copied under the DESCRIPTION heading into grammatically correct sentence structure, (pg. 10, ln. 21-22)

storing **(16, 18, 20)** the element name of the first element recited in the duplicate claim copied and edited under the DESCRIPTION heading and shown in the drawings with a first in a series of reference numerals, (pg. 11, ln. 8-22 and pg. 12, ln. 1-5)

searching for each occurrence of the first element name and replacing same with the first element name followed by the first reference numeral to provide a first identifying reference numeral for the first element name, (pg. 12, ln. 1-5)

storing the element name of the second element recited secondedly in the duplicate claim copied and edited under the DESCRIPTION heading and shown in the drawings with the next sequential number in the series following the reference numeral used to identify the first element name, (pg. 7, ln. 3-17)

searching for each occurrence of the second element name and replacing same with the second element name followed by the next number to provide a second identifying reference numeral for the second element name, (pg. 7, ln. 3-17)

automatically shifting the reference numerals in response to changing the order of occurrence of the element names in the duplicate claim copied under the DESCRIPTION heading so that the elements are numbered in order of being first recited under the DESCRIPTION heading, and (pg. 7, ln. 17-20)

automatically shifting the reference numerals in response to interleaving an additional element into the duplicate claim copied under the DESCRIPTION heading for changing the order of occurrence of the elements names in the duplicate claim copied under the DESCRIPTION heading so that all numbered elements are numbered in order of being first recited under the DESCRIPTION heading. (pg. 7, ln. 17-20)

Claim 23.   The method as set forth in claim 21 wherein the step of storing **(18)** the element name of the first element recited in the duplicate claim copied and edited under the DESCRIPTION heading and shown in the drawings is further defined as using a

first in the series of reference numerals that is above the highest numeral used to identify a Figure in the drawings. (pg. 12, ln. 1-5)

Claim 26. A computer program and a computer comprising:

a template memory **(10)** containing a document template containing the headings equivalent to: (pg. 4, ln. 10 et seq.)

"SUMMARY OF THE INVENTION

DETAILED DESCRIPTION

CLAIMS

ABSTRACT";

an independent claim processor **(12)** for drafting claims specifically defining the novelty and for duplicating at least one of the claims under the DESCRIPTION heading to make sure the description uses the exact same terminology as the claims as created in the first instance and for editing said duplicate claim into grammatically correct sentence structure; (pg. 6, ln. 4-15)

a reference number memory **(16, 20)** (pg. 7, ln. 5 et seq.) for storing the element name of the first element recited in the duplicate claim copied and edited under the DESCRIPTION heading and shown in the drawings with a first reference numeral in a series of reference numerals and for searching for each occurrence of the first element name and replacing same with the first element name followed by the first reference numeral to provide a first identifying reference numeral for the first element name and for storing the element name of the second element recited next in the duplicate claim copied and edited under the DESCRIPTION heading and shown in the drawings with the next sequential reference numeral in the series following the first reference numeral and for searching for each occurrence of the second element name and replacing same with the second element name followed by the next reference numeral to provide a second identifying reference numeral for

the second element name and for automatically shifting the reference numerals in response to changing the order of occurrence of the element names in the duplicate claim copied and edited under the DESCRIPTION heading so that the elements are numbered in order of being first recited under the DESCRIPTION heading and for automatically shifting the reference numerals in response to interleaving an additional element name into the duplicate claim copied under the DESCRIPTION heading for changing the order of occurrence of the element names in the duplicate claim copied and edited under the DESCRIPTION heading so that all numbered element names are numbered in the sequential order of being first recited under the DESCRIPTION heading. (pg. 7, ln. 3-20)

Claim 27. A computer program and a computer as set forth in claim 26 including a Figure number memory (pg. 7, ln. 3 et seq.) for receiving and storing (18) the highest Figure number used to identify Figures of the drawings, said reference number processor being responsive to said Figure number memory for replacing the occurrence of the first recited element name in said duplicate claim with said respective element name followed by the first number ending in zero following the highest Figure number to provide identifying reference numerals for said element names in the order of occurrence in said duplicate claim under the DESCRIPTION heading to avoid duplicating a Figure number as a reference numeral.

The remaining claims 3, 10, 22, 24, 25 and 28 are dependent upon one of the above claims and are patentable therewith.

VI. GROUNDS OF REJECTION

A. Rejection Summary

Claims 1, 3, 10 and 19-28 are pending in the application. Claims 1, 19, 20, 21, and 26 are independent. Independent claims 1 and 26 and dependent claims 3, 21, and 22 stand rejected under 35 U.S.C. § 103(a) as being obvious over Petruzzi et al. (U.S. Patent No.

6,049,811) in view of Rivette et al. (U.S. Patent No. 5,754,840). Claims 10, 19, 20, 23, 24, 25, 27, and 28 are also rejected over Petruzzi in view of Rivette but further in view of Newman (U.S. Patent No. 5,774,833).

B. Primary Rejection-Limitations in all Claims

The Petruzzi et al. '811 patent is relied upon to teach a method of drafting a patent application but, as admitted by the examiner, does not make any suggestion regarding automatically numbering elements in the order recited in the description let alone re-numbering when the order shifts. In addition, the Petruzzi et al. '811 Patent fails to teach that for which it is relied upon because it does not suggest the pre-step of copying the claims into the description section before applying reference numerals to element names; because the Petruzzi patent teaches drafting the description independently of the claims then "compares the words of the claims to the words in the Detailed Description . . . ." (see col. 16, ln. 9-17)

The Rivette et al. '840 patent is relied upon to compensate for the numbering of elements deficiency in the Petruzzi et al. '811 patent; however, Rivette et al. '840 also does not suggest numbering elements in the order recited in the description let alone automatically re-numbering when the order shifts. In contradistinction, Rivette et al. '840 teaches making a list of element numbers and the various element names used with those reference numbers so that the user can then manually edit the document. (Col. 15, ln. 52 through Col. 16, ln. 54 and claim 13, and as illustrated in Table 1 beginning in Col. 7, ln. 58, and in Fig. 10)

Neither does the Rivette et al. '840 patent suggest copying the claims into the description section as it teaches drafting the description independently of the claims then making a comparison of terms in the claims to the terms in the description. (as succinctly stated in Col. 9 ln. 7-17 and in claim 1)

These distinguishing limitations of adding the reference numerals in the order of elements recited in the copied claims defining the description are recited in all of the claims.

C.   Supplemental Rejection Limitation in Claims 1, 19, 20, 23 and 27

The examiner also relies upon Rivette et al. '840 to teach using the first reference numeral above the highest Figure number. However, there is no suggestion whatsoever of such a step in Rivette et al. '840.

This limitation is specifically recited in claims 1, 19, 20, 23 and 27, from which claims 3 and 10 depend.

D.   Limitation Not Separately Argued

The '833 patent to Newman was added to the Petruzzi et al. '811 and Rivette et. al. '840 combination for a teaching of placing reference numerals in parenthesis ( ) in the claims and abstract sections as specifically recited in claims 10, 19, 20, 24, 25 and 28. However, this rejection is not argued as the allowance of these claims relies upon the deficiencies in the primary references of Petruzzi et al. '811 and Rivette et al. '840 and will be allowed or rejected along with the claims from which they depend.

VII.   ARGUMENT

A.   Overview

1.   Primary Distinguishing Limitations in all Claims

It is respectfully submitted that all of the claims may be grouped together in the primary argument because all of the impendent claims 1, 19, 20, 21 and 26 recite, inter alia, the patentable distinguishing limitations of:

> *associating the first element name with the first reference*
>
> *numeral to provide a first identifying reference numeral for the*
>
> *first element name under the DESCRIPTION and associating the*
>
> *second element name with a second identifying reference numeral*
>
> *for the second element name so that the elements are numbered in*
>
> *order of being first recited under the DESCRIPTION heading, and*

automatically shifting the reference numerals in response

to changing the order of occurrence of the element names under

the DESCRIPTION heading.

2. Supplemental Distinguishing Limitations in Claims 1, 19, 20, 23 and 27

In a supplemental and separate and further distinguishing argument, claims 1, 19, 20, 23 and 27, in addition to the above reference numbering, recite:

using a first in the series of reference numerals that is

above the highest numeral used to identify a Figure in the

drawings.

3. Remaining Claims

The remaining dependent claims 3 and 10 are allowable under the supplemental argument whereas 22, 24, 25 and 28 are allowable under the primary argument.

B. Primary Argument

1. Claims Recite Document Creation, Not Comparison

The subject invention is used in the creation of a patent application in contradistinction to the prior art methods that check for errors in the previously and independently created document. The subject method prevents errors from ever occurring in the first instance during creation of the application. This is a subtle but major and specific difference, particularly in the combination of steps. For example, the prior art is replete with methods of determining the erroneous use of different terminology (element names) for the same element and for the use of the same reference numeral on different elements or different terminology. On the other hand, the subject method makes sure that such errors do not occur as the application is being created.

2. Order and Re-order of Reference Numerals After Copying Claims

After the claims are copied into the description in accordance with the subject invention to make sure the exact same terminology (element name) is used in the description as in the claims, every occurrence of an element name is assigned a reference numeral and every occurrence of that element name associated with that reference numeral has that same reference numeral, and only that reference numeral. Most importantly, reference numerals are automatically applied and re-applied to the element names in the order of the element names being first recited in the description, and are re-numbered sequentially in the event that the order of being first recited changes. Accordingly, inconsistent or different element names and inconsistent use of element names with different reference numerals are avoided during the creation as distinguished from checking for such errors after the application is complete.

The examiner relies upon Rivette et al. '840 to modify Petruzzi et al. '811 on the basis that Rivette teaches the claimed assignment and re-assignment of reference numerals to element names. However, Rivette does not come close to applicant's claimed methodology. For example, applicant's claim 21 recites these steps:

> storing the element name of the first element recited in the duplicate claim copied and edited under the DESCRIPTION heading and shown in the drawings with a first in a series of reference numerals,
> searching for each occurrence of the first element name and replacing same with the first element name followed by the first reference numeral to provide a first identifying reference numeral for the first element name,
> storing the element name of the second element recited secondedly in the duplicate claim copied and edited under the DESCRIPTION heading and shown in the drawings with the next sequential number in the series following the reference numeral used to identify the first element name,
> searching for each occurrence of the second element name and replacing same with the second element name followed by the next number to provide a second identifying reference numeral for the second element name,

> automatically shifting the reference numerals in response to changing the order of occurrence of the element names in the duplicate claim copied under the DESCRIPTION heading so that the elements are numbered in order of being first recited under the DESCRIPTION heading, and . . .

The use of different terminology or different names for the same element is avoided by assigning the identical numeral to every occurrence of an element name in the description, thus eliminating the possibility for discrepancies in the assignation of reference numerals to element names, e.g., different terms applied to the same numeral, as in Rivette et al.

3.   Teachings in Rivette et al. '840

In contrast, Rivette et al. '840 in col. 2, ln. 31, recites "[t]he invention is also very useful for *analyzing completed documents*" (emphasis added). Rivette et al. '840 teaches in col. 15, ln. 52 to col. 16, ln. 63 that the already created reference numeral is searched and the computer "assumes" that the element name or terms appearing immediately before the reference numeral comprises the element name corresponding to the reference numeral to be stored in the element index table. This is made clear in col. 16, lines 20-21 of Rivette '840 wherein it is stated that the computer "determines the element name for each reference number in the element index table." In other words, Rivette et al. '840 teaches searching for reference numerals already in the description and assumes terms preceding the reference numerals to be the element names.

The Rivette et al. system provides a list of the reference numerals used in the description and the respective element names assigned to the reference numerals whereby the user can observe inconsistencies in the element names and <u>manually</u> reconcile the discrepancies. Rivette et al. '840 explains in col. 14, ln. 61 et seq. that the user selects the previously authored reference numeral to display a list of element names or terms used with that selected reference numeral. Most importantly, as set forth in col. 16, ln. 28-60, the user

in the Rivette et al. system must edit discrepancies by changing the element names or terms used with the reference numerals.

Clearly, Rivette et al. produces a list displaying all of the various element names used in conjunction with every reference numeral recited in the description, See Figure 10. The user must manually analyze the list for inconsistencies in the reference numeral and element name pairs and must manually correct any discrepancies. In contradistinction, the subject invention provides a method in which a common reference numeral is assigned in a first use of the numeral to every occurrence of an element name in the description, thus eliminating the possibility for discrepancies in the reference numeral and element name pairs. Said another way, the subject invention assigns reference numerals to certain element names to facilitate the use of the reference numeral. A reference numeral cannot be used without assigning it to an element name.

4.   Prior Art Lack of Copying Claims Into Description

Not one reference suggests copying or duplicating the claims into the description followed by assigning reference numerals in the order of occurrence of the elements in the description, and only to element names selected by the user. This combination of steps is vital to avoiding errors during the creation of the application as distinguished from the manual checking and verification taught in the prior art.

Petruzzi '811 teaches the limitation of copying each independent claim into the summary to complete the summary of the invention (See col. 15, lines 25-30). However, this does not suggest copying a claim or a claim set into the description to make sure the exact same terminology (element names) is used in the description as in the claims. The examiner states "Petruzzi teaches the claimed limitation of copying the claims to summary which is part of specification." However, even though the summary and the description are both part of the specification, Petruzzi '811 distinguishes between the summary and the description and

specifically suggests copying the independent claims into the summary to summarize the invention rather than to make sure the exact same terminology (element names) is used in the description as the claims. There is simply no suggestion whatsoever in Petruzzi '811 to copy the claims verbatim into the description.

No reference numerals are used in the summary section; therefore, the pre-step of copying the claims into the description before assigning reference numerals is a critical combination. This critical combination is not suggested by the prior art.

The examiner also states "Petruzzi provides for a comparison of words in claims to detailed description and remind of missing words that provides the basis of copying the claims in the Detailed description" and refers to col. 16, lines 10-15. This does not provide for the basis of copying the claims into the description. Petruzzi '811 teaches a method that checks for errors in the previously and independently created document by comparing terminology in the description versus the claims. Petruzzi creates a list of every term used in the claims and a list of every term used in the description of an already competed document allowing the creator to compare the list for inconsistencies. Such a comparison is not a suggestion of copying claims into the description in the first instance.

In accordance with the subject invention, errors are prevented from ever occurring in the first instance during the creation of the application. See Petruzzi col. 16, lines 9-13, where "the computer compares the words of the claims to the words in the Detailed Description section and reminds the operator of any words in the claims not found in the detailed description." The examiner has not met the initial burden to provide some suggestion of copying a claim or a claim set into the description to make sure that the exact same terminology (element names) is used in the description as in the claims, particularly as pre-step to adding reference numerals to that exact same terminology.

5. Automatic Shift of Reference Numerals

Although all of the claims clearly distinguish over the references by reciting the building of an element list and assigning reference numerals in the order of first recitation of the element names in the edited duplicate set of claims that build the description, the claims also recite, that, should the order of the elements in the edited duplicate set of claims forming the description be changed (from the order in the original duplicated claims), the reference numerals assigned to element names in the element list will automatically shift in response to the change in the order of first recitation of the numbered elements in the description. In Rivette et al. '840 a user must manually change the reference numerals both with various element names and order of use. There is no automatic shifting of reference numerals among element names in the prior art.

C. Supplemental Argument

The examiner simply refers to "col. 1, lines 59-63, col. 14, 38-41 and also see table 1, col. 7, lines 55-col. 8, line 7" in Rivette et al. '840 for a teaching of limiting reference numerals to digits above the highest Figure number. However, not only are these lines devoid of any suggestion relating reference numerals to Figure numbers, but the entire Rivette et al. '840 patent is devoid of any such suggestion. Nor are any of the other references suggestive of this limitation.

Accordingly, claims 1, 3, 10, 19, 20, 23 and 27 are independently and additionally allowable.

D. Detailed Understanding of Rivette et al. '840

In contradistinction to Rivette et al. '840, the subject invention creates the description with element names used in the claims and positively assigns reference numerals only to specific element names selected by the user so that the computer does not have to "assume" element names from terms already used. In other words, the subject invention assigns

reference numerals only to element names selected by the user, i.e., the element name is selected by the user before the reference numeral is assigned. The subject invention assigns a reference numeral to an element name whereas Rivette et al. '840 does the opposite by assigning element "names" to reference numerals, i.e., in Rivette et al. '840 a user manually inserts the reference numeral and thereafter the program determines and lists all of the element names the creator has used with that reference numeral. For example, Rivette et al. '840 teaches a method wherein a user could draft the following text in the description of a patent application, manually assigning reference numerals to the element names:

> A computer **10** aids a user to draft a patent application **12**. The program **10** searches the patent specification **12** for a reference numeral **14** in a detailed description **16** and stores the two preceding words as an element name **18**. The element **18** is stored alongside the reference numeral **14** in an index **20**.

The computer would then search the text for reference numerals and produce a list of the element names, the two words preceding the reference numeral, used in conjunction with the reference numerals:

Reference Numeral	Number of Occurrences	Element Name
10	2	A computer
12	2	patent application
10	2	The program
12	2	patent specification
14	2	reference numeral
16	1	detailed description

18	2	element name
18	2	The element
14	2	reference numeral
20	1	an index

According to the method disclosed in Rivette et al. '840, upon the production of such an element index table (as shown in Fig. 10), a user can view all of the different element names assigned to each reference numeral. When an error or discrepancy exists, as in the above example for reference numerals 10, 12, and 18, a user can only resolve the error or discrepancy by manually changing the element names in each occurrence in the specification so that an element name is consistently used throughout the description for every occurrence of a reference numeral.

On the other hand, the present invention provides a method wherein reference numerals are, in the first use, automatically assigned to the element names selected by the user and in the description of a patent application. Given the same description as above:

> A computer aids a user to draft a patent application. The program searches the patent specification for a reference numeral in a detailed description and stores the two preceding words as an element name. The element is stored alongside the reference numeral in an index.

wherein the user selects the element names "computer," "detailed description," "element name," "index," "patent application," and "reference numeral." The subject invention automatically assigns reference numerals to each and every occurrence of each respective element name in the order of first occurrence in the description to produce a description as follows:

> A computer **10** aids a user to draft a patent application **12**. The program searches the patent specification for a reference numeral **14** in a detailed description **16** and stores the two preceding words as an element name **18**. The element is stored alongside the reference numeral **14** in an index **20**.

Additionally, the subject invention provides for automatically shifting the reference numerals in response to changing the order of first occurrence in the duplicate set of claims copied into the description. For example, a user modifies the above description to change the order of reciting "patent application **12**," "reference numeral **14**," and "detailed description **16**" as follows:

> A computer **10** searches for reference numerals **14** in the detailed description **16** to aid a user in drafting a patent application **12**. The program stores the two words preceding the reference numeral **14** as an element name **18** in an index **20**.

However, before this can appear, the present invention will subsequently shift the reference numerals in response to changing the order of first occurrence of the element names in the description by searching for each occurrence of each respective element in the order of first occurrence in the description and replacing each respective element name with that respective element name followed by successive identifying reference numerals, thereby shifting the reference numerals in response to changing the order of first occurrence to re-number the order of <u>all</u> of the elements as shown in the following description:

> A computer **10** searches for reference numerals **12** in the detailed description **14** to aid a user in drafting a patent application **16**. The program stores the two words preceding the reference numeral **12** as an element name **18** in an index **20**.

The examiner claims Rivette et al. '840 also teaches a method of shifting reference numerals in response to changing the order of occurrence. The examiner states:

> Since the reference numbers are identified and modified with element name, it would also shift the reference numerals if order of occurrence changes as claimed because element name is inserted next to reference numbers and since each occurrence of element is searched based on element number as described in col. 14, lines 60-col. 15, lines 10. the sequence of elements may change or have

changed. In such a situation, the reference numerals for a given element automatically change.

Since Rivette et al. '840 teaches assigning element names to reference numerals manually inserted by a user, there is no way for the computer to automatically shift all of the reference numerals in response to a change in the order of occurrence of the element names. Changing the order of occurrence of the element names in Rivette et al. would not affect the remaining reference numerals. The reference numerals would have to be manually changed within the document in order for the computer to assign the element names to the proper reference numerals in order to shift the reference numerals to in response to changing the order of first occurrence. Therefore, the reference numerals for a given element will not automatically shift. For example, following the teachings of Rivette et al. '840, if a user initially enters the following text into the description of a patent application:

> A computer **10** aids a user to draft a patent application **12**. The computer **10** searches the patent application **12** for a reference numeral **14**.

The computer would produce the following element index table:

Reference Numeral	Number of Occurrences	Element Name
10	2	A computer
12	2	patent application
10	2	The computer
12	2	patent application
14	1	reference numeral

If, following the teachings of Rivette et al. '840, the user modified the description of the

patent application without manually changing the reference numerals to read:

> A computer **10** searches for reference numerals **14** to aid a user in
> drafting a patent application **12**.

The element index table would subsequently display:

Reference Numeral	Number of Occurrences	Element Name
10	1	A computer
14	1	reference numerals
12	1	patent application

The element index table can be updated to reflect the changes in the description, but Rivette et al. '840 will not automatically shift the reference numerals in response to changing the order of occurrence.

The present invention will automatically shift the reference numerals in response to changing the order of occurrence of the element names in the duplicate set of claims. The examiner has incorrectly stated, "every occurrence of reference number will be replaced by reference element as claimed." The subject invention does not claim replacing the reference number with the reference element. The present invention is distinguished over Rivette et al. by searching for each occurrence of each respective element in the order of occurrence in the duplicate set of claims, replacing each respective element name with that respective element name followed by successive identifying reference numerals, and automatically shifting the reference numerals in response to changing the order of occurrence in the duplicate set of claims.

Furthermore, the examiner has stated:

> Rivette teaches a method of allowing user to identify the reference numbers and modify the element name. Word processor locate reference number and text or element name can be inserted next to reference numbers as described in col. 16, lines 47-52.

This is verified in Rivette et al. col. 16, lines 28-30 wherein "the present invention allows users to modify the elements names of reference numbers." However, assigning element names to reference numerals and allowing users to modify the element names is completely opposite to the assigning reference numerals to specific element names and re-assigning same in order of occurrence in accordance with the subject invention. The subject invention automatically assigns reference numerals to each occurrence of each respective element name to prevent errors from ever occurring during the creation of the application whereas Rivette et al. '840 teaches a method that compares and prepares a list of errors in the previously and independently created document.

E.   Summary

The examiner has failed to meet the burden of showing a clear path to obviousness, a path which must be as clear in the dark as in the light. The examiner makes many assumptions as to what would happen in accordance with the teachings of the references. The references teach comparing independently drafted claims and description and do not operate as the examiner suggests. Even if the references could be combined they would not produce the combination recited in the claims to create a patent application.

As to all of the claims, the references fail to suggest copying or duplicating the claims into the description followed by assigning reference numerals in the order of occurrence of the elements in the description, and only to specific element names.
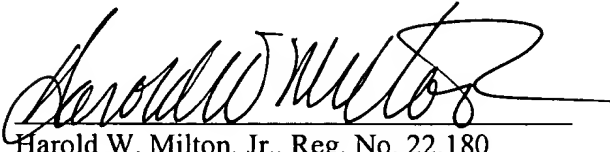

Nor do the references suggest re-numbering the elements in response to changing the order of first recitation of the elements in the description.

In addition, Claims 1, 3, 10, 19, 20, 23 and 27 also recite the limitation of limiting the first reference numeral to a digit above the highest Figure number, and none of the references suggest this patentable distinction.

U.S. Application 09/273,021

For these reasons, the reversal of the rejection of all of the claims is respectfully solicited.

Respectfully submitted,

Date: <u>January 8, 2007</u>

Harold W. Milton, Jr., Reg. No. 22,180

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT

CLAIMS

ABSTRACT OF THE DISCLOSURE";

storing a page break immediately before the "CLAIMS" heading in the computer program;

storing a page break immediately before the "ABSTRACT OF THE DISCLOSURE" heading in the computer program;

storing a footer in the computer program for displaying the attorney file identification on every page of the application;

composing by a user an independent claim in the computer program ending in a clause beginning with the words "characterized by" and reciting and isolating the novelty and preceded by at least one clause reciting prior art elements to the extent necessary to support and provide antecedent basis for the "characterized by" clause;

drafting claims in the computer ultimately dependent upon the independent claim for successively more specifically defining the patentable novelty; and

characterized by storing a duplicate set of all of the claims in the computer program, and creating the description by retrieving the duplicate set of claims under the heading "DESCRIPTION OF THE PREFERRED EMBODIMENT", searching for each occurrence of the word "said" in the duplicate set of claims copied into the specification, programming the computer program to replace the word "said" with the word "the" in the duplicate set of claims copied into the specification, and editing the duplicate set of claims copied into the specification into grammatically correct sentence structure including adding verbs, and assigning reference numerals for the first time by the steps of storing the element names of the elements in the order recited in the duplicate set of claims, storing successive numbers beginning with a number above the highest Figure number to identify the respective element names, and searching for each occurrence of each respective element name in the order of occurrence in the duplicate set of claims, replacing each respective element name with that respective element name followed by successive ones of said numbers to provide identifying reference numerals for the element names in the order of occurrence in the duplicate set of claims and automatically shifting the reference numerals in response to changing the order of occurrence in the duplicate set of claims.

3. **(Previously Presented)** The method as set forth in claim 1 including the steps of storing a duplicate of the independent claim in the computer program, retrieving the duplicate independent claim under the heading "SUMMARY OF THE INVENTION AND ADVANTAGES", and editing the duplicate independent claim copied under the heading "SUMMARY OF THE INVENTION AND ADVANTAGES" into grammatically correct sentence structure including changing "said" to "the" and adding verbs without adding further description whereby the "SUMMARY OF THE INVENTION AND ADVANTAGES" is commensurate in scope to the independent claim.

10.   **(Previously Presented)**   The method as set forth in claim 1 including the step of storing each reference numeral recited in the "CLAIMS" and in the "ABSTRACT OF THE DISCLOSURE" within parenthesis "( )", searching and replacing each such reference number in the "CLAIMS" and in the "ABSTRACT OF THE DISCLOSURE" with the corresponding stored reference number within parentheses "( )".

19.   **(Previously Presented)**   A method of preparing a patent application with a computer characterized by performing the following steps:

storing a document template in a computer program which contains headings equivalent to,

"BACKGROUND OF THE INVENTION

1) Field of the Invention

2) Description of the Prior Art

SUMMARY OF THE INVENTION AND ADVANTAGES

BRIEF DESCRIPTION OF THE DRAWINGS

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT

CLAIMS

ABSTRACT OF THE DISCLOSURE";

storing a page break in the computer program immediately before the "CLAIMS" heading;

storing a page break in the computer program immediately before the heading "ABSTRACT OF THE DISCLOSURE";

storing a footer in the computer program for displaying the attorney file identification on every page of the application;

storing a Figure paragraph in the computer program immediately after the heading "BRIEF DESCRIPTION OF THE DRAWINGS";

storing a terminal paragraph in the computer program stating it is to be understood that reference numerals in the claims are merely for convenience and are not to be in any way limiting immediately before the page break before the heading "CLAIMS";

composing by a user an independent claim in the computer program beginning with the words "characterized by" and ending in a clause reciting and isolating the novelty and preceded by at least one clause reciting prior art elements only to the extent necessary to support and provide antecedent basis for the recitations in the "characterized by" clause;

composing by a user claims in the computer program ultimately dependent upon the independent claim for successively more specifically defining the novelty;

storing a duplicate of the independent claim in the computer program,

retrieving the stored independent claim under the heading "SUMMARY OF THE INVENTION AND ADVANTAGES", and editing the duplicate independent claim copied under the heading "SUMMARY OF THE INVENTION AND ADVANTAGES" into grammatically correct sentence structure including changing the word "said" to "the" and adding verbs without adding further description whereby the "SUMMARY OF THE INVENTION AND ADVANTAGES" is commensurate in scope to the independent claim;

storing a duplicate set of all of the claims in the computer program, and creating the description by retrieving the duplicate set of claims under the heading "DESCRIPTION OF THE PREFERRED EMBODIMENT";

searching for each occurrence of the word "said" in the duplicate set of claims copied into the specification, programming the computer program to replace the word "said" with the word "the" in the duplicate set of claims copied into the specification, and editing

the duplicate set of claims copied into the specification into grammatically correct sentence structure including adding verbs;

storing the element names in the computer program of the elements in the order recited in the duplicate set of claims, storing in the computer program successive even numbers beginning with a number above the highest Figure number to identify the respective element names, and searching in the computer program for each occurrence of each respective element name in the order of occurrence in the duplicate set of claims and replacing each respective element name with that respective element name followed by successive ones of the even numbers to provide for the first time identifying reference numerals for the element names in the order of occurrence in the duplicate set of claims and automatically shifting the reference numerals in response to changing the order of occurrence in the duplicate set of claims;

adding each reference numeral to every showing of the element in the drawings;

selecting and storing in the computer program abstract sentences including reference numbers from under the heading "DESCRIPTION OF THE PREFERRED EMBODIMENT" which most succinctly and specifically describe the elements shown in the drawings with a description of the elements in the "characterized by" clause commensurate with the specificity recited in dependent claims, and retrieving the abstract sentences under the heading "ABSTRACT OF THE DISCLOSURE"; and

storing in the computer program each reference numeral recited in the "CLAIMS" and in the "ABSTRACT OF THE DISCLOSURE" within parenthesis "( )", searching in the computer program and replacing each such reference numeral in the "CLAIMS" and in the "ABSTRACT OF THE DISCLOSURE" with the corresponding stored reference number within parentheses "( )".

20.   **(Previously Presented):**   A computer program and a computer comprising:

a template memory containing a document template containing headings equivalent to,

immediately after the heading "BRIEF DESCRIPTION OF THE DRAWINGS";

the text,

"The invention has been described in an illustrative manner, and it is to be understood that the terminology which has been used is intended to be in the nature of words of description rather than of limitation.

Obviously, many modifications and variations of the present invention are possible in light of the above teachings. It is, therefore, to be understood that within the scope of the appended claims, wherein reference numerals are merely for convenience and are not to be in any way limiting, the invention may be practiced otherwise than as specifically described."

before said page break preceding the heading "CLAIMS";

and characterized by an independent claim processor for duplicating and storing an independent claim under the heading "SUMMARY OF THE INVENTION AND ADVANTAGES" and for editing the duplicated independent claim copied under the heading "SUMMARY OF THE INVENTION AND ADVANTAGES" into grammatically correct sentence structure including changing "said" to "the" and adding verbs whereby the recitation under the heading "SUMMARY OF THE INVENTION AND ADVANTAGES" is commensurate in scope to said independent claim;

a multiple claim processor for duplicating and storing all of the claims under said heading "DESCRIPTION OF THE PREFERRED EMBODIMENT" for creating the description and for searching and replacing each occurrence of the word "said" in said duplicate set of claims copied under the heading "DESCRIPTION OF THE PREFERRED

EMBODIMENT" with the word "the", and for editing said duplicate set of claims into grammatically correct sentence structure;

a reference number memory for storing successive even numbers beginning with the number ten;

a Figure number memory for receiving and storing the highest Figure number used to identify Figures of the drawings;

a reference number processor responsive to said Figure number memory for storing the element names of the elements in the order recited in said duplicate set of claims and for searching and replacing each occurrence of each respective element name in the order of occurrence in said duplicate set of claims with said respective element name followed by successive ones of said even numbers beginning with the first number ending in zero following the highest Figure number to provide for the first time identifying reference numerals for said element names in the order of occurrence in said duplicate set of claims and automatically shifting the reference numerals in response to changing the order of occurrence in the duplicate set of claims;

an abstract processor for selecting and storing abstract sentences including said reference numerals from under said heading "DESCRIPTION OF THE PREFERRED EMBODIMENT" and duplicating said abstract sentences under said heading "ABSTRACT OF THE DISCLOSURE"; and

a parenthesis processor for automatically enclosing each reference numeral within parentheses in said claims and in said "ABSTRACT OF THE DISCLOSURE".

21. **(Previously Presented)** A method of preparing a patent application with a computer comprising the steps of:

storing a document template in a computer program which contains headings equivalent to:

SUMMARY OF THE INVENTION

DETAILED DESCRIPTION

CLAIMS

ABSTRACT

drafting claims for specifically defining the novelty; and

characterized by duplicating at least one of the claims under the DESCRIPTION heading to make sure the description as created in the first instance uses the exact same terminology as used in the claims,

editing the duplicate claim copied under the DESCRIPTION heading into grammatically correct sentence structure,

storing the element name of the first element recited in the duplicate claim copied and edited under the DESCRIPTION heading and shown in the drawings with a first in a series of reference numerals,

searching for each occurrence of the first element name and replacing same with the first element name followed by the first reference numeral to provide a first identifying reference numeral for the first element name,

storing the element name of the second element recited secondedly in the duplicate claim copied and edited under the DESCRIPTION heading and shown in the drawings with the next sequential number in the series following the reference numeral used to identify the first element name,

searching for each occurrence of the second element name and replacing same with the second element name followed by the next number to provide a second identifying reference numeral for the second element name,

automatically shifting the reference numerals in response to changing the order of occurrence of the element names in the duplicate claim copied under the DESCRIPTION heading so that the elements are numbered in order of being first recited under the DESCRIPTION heading, and

automatically shifting the reference numerals in response to interleaving an additional element into the duplicate claim copied under the DESCRIPTION heading for changing the order of occurrence of the elements names in the duplicate claim copied under the DESCRIPTION heading so that all numbered elements are numbered in order of being first recited under the DESCRIPTION heading.

22. **(Previously Presented)** The method as set forth in claim 21 including drafting the broadest independent claim ending in a novelty clause reciting and isolating the novelty and preceded by at least one clause reciting prior art elements to the extent necessary to support and provide antecedent basis for the novelty clause, storing a duplicate of the novelty clause in the computer program, retrieving the duplicate novelty clause under the heading SUMMARY OF THE INVENTION, and editing the duplicate novelty clause copied under the heading SUMMARY OF THE INVENTION into grammatically correct sentence whereby the SUMMARY OF THE INVENTION is commensurate in scope to the novelty clause in the broadest independent claim.

23. **(Previously Presented)** The method as set forth in claim 21 wherein the step of storing the element name of the first element recited in the duplicate claim copied and edited under the DESCRIPTION heading and shown in the drawings is further defined as using a first in the series of reference numerals that is above the highest numeral used to identify a Figure in the drawings.

24. **(Previously Presented)** The method as set forth in claim 21 including drafting an abstract under the ABSTRACT heading, and searching for each occurrence of each element name and replacing same with the respective element name followed by the assigned reference numeral to provide a reference numeral with the occurrence of each element name recited under the DESCRIPTION and CLAIMS and ABSTRACT headings.

25. **(Previously Presented)** The method as set forth in claim 24 including automatically adding parenthesis ( ) about each reference numeral recited in the CLAIMS and ABSTRACT headings.

26. **(Previously Presented)** A computer program and a computer comprising:

a template memory containing a document template containing the headings equivalent to:

SUMMARY OF THE INVENTION

DETAILED DESCRIPTION

CLAIMS

ABSTRACT

an independent claim processor for drafting claims specifically defining the novelty and for duplicating at least one of the claims under the DESCRIPTION heading to make sure the description uses the exact same terminology as the claims as created in the first instance and for editing said duplicate claim into grammatically correct sentence structure;

a reference number memory for storing the element name of the first element recited in the duplicate claim copied and edited under the DESCRIPTION heading and shown in the drawings with a first reference numeral in a series of reference numerals and for

searching for each occurrence of the first element name and replacing same with the first

element name followed by the first reference numeral to provide a first identifying reference

numeral for the first element name and for storing the element name of the second element

recited next in the duplicate claim copied and edited under the DESCRIPTION heading and

shown in the drawings with the next sequential reference numeral in the series following the

first reference numeral and for searching for each occurrence of the second element name and

replacing same with the second element name followed by the next reference numeral to

provide a second identifying reference numeral for the second element name and for

automatically shifting the reference numerals in response to changing the order of occurrence

of the element names in the duplicate claim copied and edited under the DESCRIPTION

heading so that the elements are numbered in order of being first recited under the

DESCRIPTION heading and for automatically shifting the reference numerals in response to

interleaving an additional element name into the duplicate claim copied under the

DESCRIPTION heading for changing the order of occurrence of the element names in the

duplicate claim copied and edited under the DESCRIPTION heading so that all numbered

element names are numbered in the sequential order of being first recited under the

DESCRIPTION heading.

27. **(Previously Presented)** A computer program and a computer as set forth in

claim 26 including a Figure number memory for receiving and storing the highest Figure

number used to identify Figures of the drawings, said reference number processor being

responsive to said Figure number memory for replacing the occurrence of the first recited

element name in said duplicate claim with said respective element name followed by the first

number ending in zero following the highest Figure number to provide identifying reference

numerals for said element names in the order of occurrence in said duplicate claim under the DESCRIPTION heading to avoid duplicating a Figure number as a reference numeral.

28. **(Previously Presented)** A computer program and a computer as set forth in claim 26 including a subprocessor for automatically searching for each occurrence of each element name and replacing same with the respective element name followed by the assigned reference numeral with the occurrence of each element name recited under the CLAIMS and ABSTRACT headings along with adding reference numerals to the element names recited under the DESCRIPTION heading.
